THE J. N. ADAM MEMORIAL HOSPITAL

FROM the following views the reader will be able to get some idea as to the size, number of buildings, construction, etc., of the J. N. Adam Memorial Hospital at Perrysburg, N. Y. This Institution was built and is being maintained by the City of Buffalo to care for its tuberculosis sufferers.

The history of this Institution dates back some time prior to 1912 when, thru the effective efforts of John H. Pryor, M. D. and the Hospital Commission, the beautiful situation in the Cattaraugus Hills upon which the numerous buildings are erected was donated by the Honorable J. N. Adam, late mayor of Buffalo. His successor, the Honorable Louis P. Fuhrman, took up the project and our present mayor, the Honorable George S. Buck has, and is making many improvements which are a great credit to him and the City of Buffalo.

It is the wish of many that this booklet may acquaint the general public with this Institution, its work, and officers. Residents of Buffalo suffering from tuberculosis are brought here, where they get a new outlook on life. Instead of being hopeless sufferers they are thru the three elements of cure: rest, good food and fresh air, made into new men and women, ready to go back to the city to take up their duties as citizens of Buffalo.

The various buildings are ideally located, being built on the side of the hills facing north and south. The spacious, beautiful location, woodland advantages, purity of air and greater amount of sunshine also help materially. From the Pavilion porches one gets an extensive view of perhaps fifty miles, and on a clear day Buffalo and the Canadian shore are plainly visible.

On November 25, 1912, the Pavilions for the treatment of tuberculosis of the lungs were officially opened. Two years later the Sun Cure Pavilions were opened.

In these Pavilions tuberculosis of the bones, joints, glands, and other cases of surgical tuberculosis are treated by Heliotherapy—commonly called "Sun Cure," after the method of Dr. Rollier of Leysin, Switzerland, with which he has accomplished much in the Swiss Alps. The Sun Cure, as practiced by Rollier, is not a local treatment; it is given upon the whole naked body, at all seasons when there is sun. It is a veritable bath of air and sunlight.

It is a pleasure to watch the continued improvement of the patient under this form of treatment, and a visit to the various buildings is enlightening and educational to all.
